

Student: Riya Sharma Roll No. 17

Ans 2. Arteries carry blood away from the heart.

They have thick muscular walls.

Q1. Photosynthesis is the process by which green plants

use sunlight to make glucose from carbon dioxide

and water.

11 b Move the plant back into bright sunlight so it can

resume making chlorophyll.

Student: Riya Sharma Roll No. 17

4. Chlorophyll is the green pigment that absorbs light energy for photosynthesis.

11(a) Without light the plant cannot make chlorophyll, so the leaves lose their green colour.

Rough work: $6\text{CO}_2 + 6\text{H}_2\text{O} \rightarrow \text{C}_6\text{H}_{12}\text{O}_6 + 6\text{O}_2$
