

Ans 2. Arteries carry blood away from the heart.
They have thick muscular walls to withstand the high pressure of the blood.

Q1. Photosynthesis is the process by which green plants prepare their own food using sunlight, carbon dioxide and water.

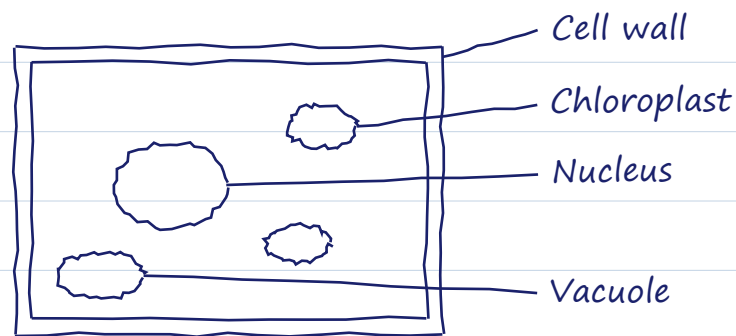

The equation ~~is~~ balanced equation is :

7 b Keep the plant back in bright sunlight so that it can make chlorophyll again.

Q5. Chlorophyll is the green pigment present in the chloroplast. It absorbs light energy from the sun and converts it into chemical energy.

4. Labelled diagram of a plant cell :

6. The nephron is the functional unit of the kidney. It filters the blood and removes waste products

such as urea and excess salts. It also reabsorbs useful substances like glucose and water back into the blood.

- 7 (a) In the dark the plant cannot carry out photosynthesis, so it cannot make chlorophyll. Without chlorophyll the leaves lose their green colour and turn pale.
